

```
class Login extends React.Component {  
  login = (data) => {  
    if (data.isCat) {  
      this.setState({  
        logged: true,  
        ...data  
      })  
    }  
  }  
  
  render() {  
    <form onSubmit={this.login}>  
      ...  
    </form>  
  }  
}
```

**Be careful when
creating closure**
