

```
// Signature  
React.createElement(  
  type,  
  [props],  
  [...children]  
)
```

```
class Header extends React.Component {  
  render() {  
    const { isCat, name } = this.props  
    const nodeName = isCat ? 'H1' : 'SPAN'  
  
    return <nodeName>{name}</nodeName>  
  }  
}
```

[Try it yourself](#)

TIP: Using uppercase for the first letter (i.e. nodeName)  
will work in JSX as well
