

What should I use?

It depends

Both might impact the Component's performance.

How will I know?

Mas-sur-e

Post. I'll be talking about React Performance next talk.

What should I use?

It depends

Both might impact the Component's performance.

How will I know?

Measure

*Psst.. I'll be talking about **React Performance** for my next talk.*

```
class Login extends React.Component {  
  constructor(props) {  
    super(props)  
    this.login = this.login.bind(this)  
  }  
  
  login(data) {  
    if (data.isCat) {  
      this.setState({  
        logged: true,  
        ...data  
      })  
    }  
  }  
  
  render() {  
    <form onSubmit={this.login}>  
      ...  
    </form>  
  }  
}
```
