```jsx
class Control extends React.Component {
  onSubmit = (ev) => {
    ev.preventDefault()
    const text = ev.target.inputText.value;
    window.alert(`Secret: ${text}`)
  }

  render() {
    return (
      <form onSubmit={this.onSubmit}>
        <input
          name="inputText"
        />
        <button type="submit">
          Submit
        </button>
      </form>
    )
  }
}
```

Try it yourself

```
class Control extends React.Component {
